PROFESSIONAL SUMMARY

Results-driven Computer Science Engineering student at SRM Institute of Science and Technology with practical experience in machine learning, full-stack software development, and data analytics. Developed deep learning models achieving 95%+ classification accuracy in agricultural computer vision and built scalable web applications during an engineering internship at HumaxMindz Enricherz. Proficient in Python, C++, React.js, SQL, and Agile SDLC methodologies, with strong competencies in data structures, algorithms, and business intelligence dashboards (Power BI). Dedicated to delivering high-performance, maintainable code architectures and impactful software solutions.

EDUCATION

SRM Institute of Science and Technology, Chennai, India — 2023 – Present
B.Tech in Computer Science and Engineering

Kathmandu Model Higher Secondary School, Kathmandu, Nepal — 2021 – 2023
+2 Science – Grade: 81.75%

EXPERIENCE

Software Development Intern: HumaxMindz Enricherz Pvt. Ltd. | Chennai, India — Jul 2025 – Jan 2026

- Developed and tested scalable web applications in collaboration with cross-functional engineering teams, improving feature delivery speed by 20%.
- Applied Agile methodologies across sprint planning, code reviews, and the complete software development lifecycle (SDLC).
- Enhanced system stability and application reliability through systematic testing, debugging, and real-world project problem-solving.

PROJECTS

Detection and Severity Assessment of Water Stress in Agricultural Crops — Aug 2026 – Present
Python, PyTorch, OpenCV, Multi-Spectral Imagery

- Architected deep learning computer vision models to detect early-stage crop water stress and classify severity levels across multi-spectral datasets.
- Engineered image preprocessing and feature extraction pipelines using OpenCV and Python to compute vegetative water indices with 94%+ diagnostic accuracy.
- Designed automated analytics pipelines to support precision irrigation management, resource conservation, and agricultural drought mitigation.

Weed Detection Using GAN and CNN — Jul 2025 – Jan 2026
Python, TensorFlow/PyTorch, OpenCV

- Built a deep learning model utilizing GAN for synthetic data augmentation and CNN for high-accuracy weed classification.
- Enhanced model generalization and performance on limited agricultural datasets, attaining 95%+ classification accuracy for precision farming.
- Implemented end-to-end data preprocessing pipelines, model training workflows, and evaluation metrics using PyTorch and OpenCV.

Responsive Portfolio Website — 2024 – Present
HTML5, CSS3, JavaScript | GitHub

- Developed a responsive personal portfolio web application using semantic HTML, CSS, and modern JavaScript.
- Deployed via GitHub Pages to showcase technical projects and improve professional visibility.

SKILLS

- Python, C & C++
- Data Structures & Algorithms
- Object-Oriented Design (OOP)
- Machine Learning & Deep Learning
- Debugging & Optimization
- React.js & JavaScript
- HTML5 & CSS3
- SQL & Relational Databases
- NoSQL Databases
- Responsive Web UI Design
- Git & GitHub Version Control
- VS Code & Anaconda
- TensorFlow & PyTorch
- Power BI & Data Analytics
- Agile & SDLC Methodologies

CERTIFICATIONS

- Foundations: Data, Data, Everywhere – Google (Coursera) — **Coursera**
- DBMS Fundamentals – Scaler — **Scaler**
- SQL Using AI – AI For Techies — **AI For Techies**

LEADERSHIP & ACTIVITIES

- **Member** – Computer Society of India (CSI), SRM-KTR • **Aarush SRM Tech Fest** – Event Management Team
- **Environmental Volunteer** – Project Birgunj Swacha Hawa: Contributed 130+ hours toward air quality improvement, environmental surveys, and community sustainability initiatives.
